

PMI INSUFFLATION NEEDLE

Available in standard and bariatric lengths and designed for safety and ease of use.

The **PMI INSUFFLATION NEEDLE** is indicated to establish pneumoperitoneum prior to abdominal endoscopy. The stainless steel "Veress" style needle includes design technology focused on safety and ease of use.

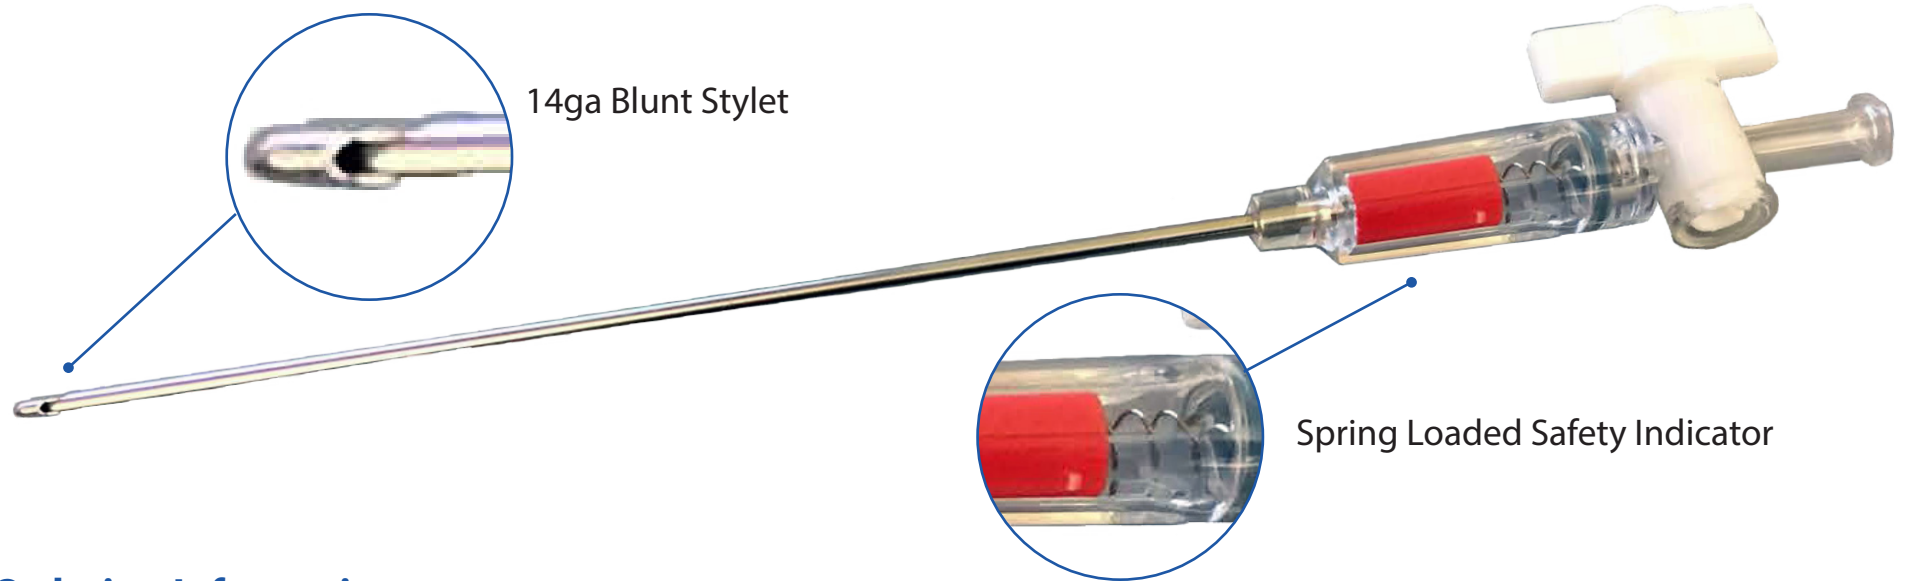

PMI INSUFFLATION NEEDLE Features:

- 14-gauge stainless steel needle with a stopcock and luer-lock connector, in two lengths
- Safety indicator on the handle
- Spring loaded, blunt stylet
- Sterile disposable product for single patient use

PMI INSUFFLATION NEEDLE Benefits:

- Simple and complete for easy connection to insufflator
- Safety indicator clearly identifies when spring-loaded stylet penetrates the peritoneum
- Single use product prevents cross contamination
